PORTFOLIO
gerizal.github.io

TECHNICAL SKILLS

Backend

PHP (Laravel, CodeIgniter), Node.js, Python, REST APIs, Microservices, Git

Frontend

JavaScript, React, Next.js, Nuxt.js, Vue.js, HTML5, CSS3, Tailwind, shadcn/ui

Databases

MySQL, MongoDB, Redis, Elasticsearch, Query Optimization, Indexing & Sharding

Cloud & DevOps

AWS (EC2, RDS, S3), GCP, Azure, Docker, CI/CD, Linux Administration, OpenVPN

AI & Agents

Claude API Integration, Multi-Agent Systems, LLM Workflow Design, Prompt Engineering

Practices

System Architecture, Agile/Scrum, Code Review, Technical Mentoring, ISO 27001

PROFESSIONAL SUMMARY

Fullstack Engineer and product builder with 10+ years of hands-on experience architecting scalable web applications across the entire stack — from database design to production deployment. Proven track record shipping mission-critical SaaS platforms with Laravel, Node.js, Python, React, and Next.js, backed by distributed systems expertise across MySQL, MongoDB, Redis, and Elasticsearch. Currently founding socialrush.id, where I build the platform end-to-end, and previously spent 8 years at ASTRNT — progressing from Fullstack Developer to CTO — leading engineering through ISO 27001 certification and 40% productivity gains. Seeking to return to a hands-on engineering role, bringing rare depth: the technical rigor of a senior builder combined with the product sense and delivery discipline of someone who has owned systems from zero to scale.

PROFESSIONAL EXPERIENCE

Founder & Builder

socialrush.id

Feb 2026 – Present · Bandung, Indonesia

- ▶ Founded and built end-to-end a platform that helps creators, brands, and businesses accelerate social media growth through scalable engagement solutions.
- ▶ Architected and coded the entire stack solo — from database schema and backend APIs to frontend UI and deployment pipeline — proving ability to ship production systems independently.
- ▶ Owning product strategy, growth systems, and platform development for the creator economy and digital marketing technology space.

Chief Technology Officer

PT Astronaut Teknologi Indonesia (ASTRNT)

Jan 2023 – Present · Bandung, Indonesia

- ▶ Architected and shipped core platform modules for an AI-powered assessment and interview SaaS, including candidate progression pipelines, AI-assisted job creation, and smart notification systems serving enterprise clients.
- ▶ Built and operated web scraping pipelines using Puppeteer to scrape LinkedIn job postings filtered for fresh graduates, feeding the extracted data into awalkarir.id — an acquired brand (formerly Popskul) integrated into ASTRNT's platform.
- ▶ Hands-on engineered system architecture using a polyglot stack: Laravel, Node.js, and Nuxt.js for services and frontend; Python for AI/ML integrations; Elasticsearch for search; Redis for caching; and MongoDB alongside MySQL for hybrid data needs.
- ▶ Integrated Claude API into production workflows for intelligent candidate evaluation and content generation, engineering robust retry logic and failover handling for high-availability AI features.
- ▶ Led ISO 27001:2022 certification effort — defined security controls, infrastructure hardening, and engineering processes that passed external surveillance audit on first attempt.
- ▶ Grew engineering team productivity by 40% through introducing code review standards, sprint planning discipline, and mentoring developers on database architecture and scalable patterns.
- ▶ Owned system performance, availability, and cost efficiency end-to-end — ensuring client-facing products met latency and uptime SLAs.

Technical Lead

PT Astronaut Teknologi Indonesia (ASTRNT)

Feb 2020 – Jan 2023 · Remote (Bandung/Jakarta)

- ▶ Led engineering execution for ASTRNT's mobile-first assessment platform serving recruiters, universities, and enterprise employers across Southeast Asia.
- ▶ Designed and implemented core backend services in Laravel and Node.js, including video interview processing, candidate scoring engines, and distribution workflows.
- ▶ Drove migration to cloud-native infrastructure on AWS, setting up VPC networking, auto-scaling, and OpenVPN for secure internal access — reducing infrastructure incidents significantly.
- ▶ Conducted thorough code reviews, enforced coding standards, and established testing processes to catch issues early in the development cycle.
- ▶ Mentored junior and mid-level developers on Laravel best practices, React/Next.js patterns, and database optimization.

Fullstack Developer

PT Astronaut Teknologi Indonesia (ASTRNT)

Feb 2019 – Feb 2020 · Bandung, Indonesia

- ▶ Built end-to-end features across Laravel backend and React frontend for ASTRNT's early-stage assessment platform.
- ▶ Designed and optimized database schemas, indexing strategies, and queries for efficient data retrieval at scale.
- ▶ Integrated third-party services (email, analytics, video processing) and identified performance bottlenecks across both frontend and backend during product-market-fit iterations.

Freelance Fullstack Developer

langgan.id · Selected Freelance Projects

Aug 2019 – Dec 2019 · Remote

- ▶ Built and maintained langgan.id using Laravel and React — delivered full lifecycle from requirements to production.

Web Developer (Multiple Roles)

PT Shirobyte · .NETXPERT (Malaysia) · PT Smooets · PT Sarana Pancakarya Nusa · and others

2016 – 2019 · Indonesia & Malaysia

- ▶ Delivered commercial web applications across multiple agencies, including jabarqr.id (QR payment platform, CodeIgniter), Dreams DBKL and SSP DBKL (government projects in Selangor, Malaysia, Laravel), and butikdukomsel.com (e-commerce, Prestashop/Zend PHP).
- ▶ Built and maintained book marketplace platform for PT Sarana Pancakarya Nusa using Laravel and CodeIgniter.
- ▶ Gained broad exposure to PHP ecosystems, MySQL, and modern deployment practices across e-commerce, government, and early-stage startup contexts.

EDUCATION

Bachelor of Information Technology

Universitas Jenderal Achmad Yani (Unjani)

2012 – 2016 · Cimahi, West Java
